How to Use Entertainment Devices on the UAF Network.

Need to get your gaming on or watch some movies? Here’s what you need to do:

*Please note: The University of Alaska - Office of Information Technology supports only wired connectivity to personal entertainment devices. A wired connection guarantees the best possible performance for your device.*

**Step 1:** Plug the device into the wall port provided to you in your room with an ethernet cable.

**Step 2:** Power on your device and locate the MAC address of your personal entertainment system. If you need assistance finding the MAC address, please locate the owner’s manual or use your favorite search engine for instructions to find it.  

| A MAC address is a combination of 12 characters that is unique to your device. Example: 01-23-45-67-AB-CD |

**Step 3:** Give the OIT Support Center a call. Let the technician on the phone know you’d like to have a device added to the network and give them the MAC address.

**OIT Support Center 450-8300**
