

Twelve Different Methods of Printing from the Internet

Printing Basics for PC Users

Your computer controls your ability to print.

1. Click the Print button on the browser toolbar
2. Click File on the menu bar, then Print from the drop- down menu
This method provides the following options:
 - A. Number of pages
 - B. Number of copies
 - C. Printer selection
 - D. Print as laid out on the screen
 - E. Print all frames individually
 - F. Print all linked documents (bad idea)
 - G. Print table of links
 - H. Paper orientation
 - I. Page order
 - J. Advanced printer options
 - K. Tray selection
 - L. Advanced paper/print quality optionsThis list may vary, depending on your printer, printer driver, and operating system
3. Click on the web page to select the desired frame, then click File on the menu bar, then Print from the drop- down menu.
This method provides options in addition to those listed in method #2:
 - A. Print only the selected frame
4. Ctrl P. Same as method #2.
5. Left click the frame you want to print, then Ctrl P. Same as method #3.
6. Right click the web page (or frame), then left click Print from the pop- up menu. This provides all of the options in methods #3 and #4.
7. Right click the link on a web page, then click Print Target from the pop- up menu. Your print options may vary, depending of your operating system, printer, printer drivers, and file type.
8. Select (highlight) what you want to print, then right click the highlighted area, and click Print from the pop- up menu.
9. Click Edit from the menu bar, then Select All from the drop- down menu. Then select Edit from the menu bar again, and Copy. Click Start from the task bar, then Programs, then open the editor (word processor) of your choice, such as NotePad, WordPad, Word, or WordPerfect. Open a document. Then use the Paste command on your editor to paste the information to your document. Use your editor's Print function to print the document.

10. Use method #9 above, but select (highlight) only the text you want to print, instead of Edit/Select All.
11. Right click a link on a web page, then select Open in New Window. Use any of the previous methods to print.
12. Right click on a link on a web page, and then select Save As. Save the file to your hard drive (or floppy disk). Open the file in the software of your choice, and print using any of the previous methods.

There are lots more printing methods available, but these are the few that I thought of quickly.
