

Open the Citrix ICA Editor. Once open go to File, Open, and browse to and open your configuration file for Banner Production or Oracle Databrowser 6i Runtime. These configuration files are the icons that you double click on to get into Banner. When you have opened the file you need to make the changes as pictured below:

Change the username/password/domain/Network Protocol/ and Connect To: by putting in oratools as the username, banner1 as the password and sw in the domain field. Click on the Default Settings... button and verify your settings matches the ones pictured below. Banner and Oracle Databrowser uses the same Default settings. Once finished making changes click on Save, this will save your adjusted settings and a Icon will appear on your desktop. You may have to click on File Save As to save multiple connections.
