

The information in this document is for configuring email clients like Thunderbird, Outlook, and Apple Mail.

You will **need to know your email username and password**, in addition to the information below, to setup your email client.

**UAF Customers** will need to **make sure their email account has been activated**. To activate your email account, go to [weblookup.uaf.edu](http://weblookup.uaf.edu).

**Statewide Customers** will need to have their email account created by the OIT Support Center..

## **UAF Email Account Settings**

---

**Server Type:** IMAP

**Incoming mail server:** fxxxx.email.uaf.edu, where *fxxxx* is your email username.

**Outgoing mail server:** smtp.uaf.edu – no authentication required.

Note: This server cannot be used outside the UA Network. When traveling you will need you use a VPN connection, or the local outgoing email server.

## **Statewide Email Account Settings**

---

**Server Type:** IMAP

**Incoming mail server:** email.alaska.edu

**Outgoing mail server:** email.alaska.edu:587  
*Authentication method:* password
