

Preliminary Course Registration and Admission Activity, Fall 2026

Week 5 of Instruction

September 21, 2026

This report summarizes Fall 2026 course registration and admission activity as of Monday, September 21, 2026. Trend figures are normalized relative to the first day of instruction. The deadline for students to add or drop semester-length courses was Friday, September 4, 2026; however, students enrolling in short-session and late-start courses will continue to generate registration activity through the end of the term.

Closing Outlook

If current registration patterns continue, approximately 20,438 students are expected to enroll by the close of the Fall 2026 term, representing essentially no change from Fall 2025 (approximately 88 fewer students). Student credit hour (SCH) registration is projected to reach roughly 186,185 credits, up approximately 632 credits from Fall 2025. While enrollment remains largely unchanged, students are taking slightly heavier course loads on average, resulting in modest SCH growth despite flat headcount trends.

The most significant development in Fall 2026 is not enrollment volume itself, but rather enrollment conversion. System-wide applications and admissions have expanded substantially compared with last year. However, registered student counts have remained relatively flat, producing a notable decline in the proportion of admitted students who ultimately enroll. Although late-start and short-session enrollment activity will continue through the term, the current conversion gap remains considerably larger than historical patterns and represents the most important enrollment-management challenge for Fall 2026.

Historical and current system-wide registration trends for headcount and SCH are presented on pages 13 and 14.

Course Registration

As of September 21, 2026, 19,529 students had registered for 183,428 Fall semester credit hours system-wide. Headcount declined by 84 students (-0.4 percent), while SCH registration increased by 622 credits (+0.3 percent). This divergence highlights a positive system-wide trend: enrolled students are taking slightly more credits than a year ago, allowing SCH production to grow despite relatively stable enrollment.

System-wide stability reflects offsetting institutional trends, with enrollment gains at UA Fairbanks (UAF) and UA Southeast (UAS) largely compensating for modest declines at UA Anchorage (UAA).

At UAA, registration declined modestly, with headcount down 256 students (-2.3 percent) and SCH down 1,238 credits (-1.2 percent). Growth at Kodiak College (+164 students, +552 SCH), Prince William Sound College (+114 students, +335 SCH), and the School of Education (+64 students, +276 SCH) helped offset declines across several other academic units. Notably, the School of Education recorded one of the university's strongest rates of growth, with both headcount and SCH increasing by more than 20 percent. Additional UAA detail is provided on page 3.

Enrollment growth continued at UAF, where headcount increased by 120 students (+1.6 percent) and SCH grew by 1,496 credits (+2.3 percent). Growth was broad-based across several academic units, with particularly strong gains in Liberal Arts, Business and Security Management, Natural Science and Mathematics, and Engineering and Mines. Together, these areas accounted for most of the university's enrollment growth. Additional UAF details are provided on page 4.

UAS posted modest university-wide growth, increasing headcount by 51 students (+2.8 percent) and SCH by 364 credits (+2.9 percent) compared with last year. Growth was driven primarily by the community campuses, with Ketchikan Campus (+120 students, +639 SCH) and Sitka Campus (+38 students, +267 SCH) more than offsetting enrollment declines at the Juneau Campus. Additional UAS details are available on page 5.

Nearly 4 percent of registered students (767) are enrolled at more than one UA university, accounting for the difference between the sum of university-level enrollments and the unduplicated system total. While registration activity remains stable overall, application and admissions trends reveal important shifts in the Fall 2026 enrollment pipeline.

Applications & Funnel Metrics

System-wide initiated applications reached 17,579 for Fall 2026, an increase of 11 percent (1,749 applications) over Fall 2025. Accepted applicants increased by 22 percent to 12,037, raising the acceptance rate from 62 percent to 68 percent. A substantial portion of this growth was driven by first-time student applicants, whose application volume increased by 25 percent year over year. In contrast, transfer and graduate applications declined, indicating a changing composition within the enrollment pipeline.

Importantly, this system-wide growth in applications and admissions occurred despite the implementation of fraud-prevention software at UAA in April 2026. The software actively identifies and excludes invalid applications that were included in Fall 2025 counts, suggesting that underlying applicant interest may be stronger than simple year-over-year comparisons indicate.

Despite the substantial expansion at the top of the enrollment funnel, the number of admitted students who had registered for courses declined by 12 percent (-583 students), resulting in a drop in system-wide yield from 49 percent to 35 percent. This decline in conversion remains the most significant change in the Fall 2026 enrollment environment and will be an important indicator to monitor throughout the remainder of the registration cycle.

Application and enrollment trends varied by university:

UAF recorded dramatic increases in both applications and admissions, while overall university enrollment increased only modestly. As a result, UAF's applicant-to-enrollment conversion rate declined from 34 percent to 16 percent. Because current enrolled headcount and admissions funnel metrics capture different populations and enrollment behaviors, the university has experienced headcount growth despite substantially weaker conversion performance among admitted applicants. UAF's yield rate will remain an important measure to monitor through the remainder of the term.

UAS posted growth across nearly every stage of the enrollment funnel, including applications, admissions, and registered students. UAS was the only university to improve enrollment outcomes while also maintaining relatively stable conversion rates from admissions to registration.

UAA experienced declines in applications, admissions, and enrolled students. However, because UAA implemented fraud-prevention software in April 2026, year-over-year application comparisons should be interpreted cautiously. Application counts for Fall 2025 included invalid applications that are no longer represented in current-year totals.

Additional application, admission, and enrollment funnel details for UAA, UAF, and UAS are available on pages 6-7, 8-9, and 10-11, respectively. Unduplicated system-wide application trends are provided on page 12.

Course Registration

Week 5 of Instruction

Fall 2025 and Fall 2026 (September 22, 2025 and September 21, 2026)

Note: Information is preliminary. Includes all for-credit course registration activity recorded in Banner. Valid trends are reported by normalizing dates relative to the start of instruction for each Fall semester. Fall 2026 semester instruction began Monday, August 24 and Fall 2025 semester instruction began Monday, August 25. Headcount is unduplicated at the reporting level, counting each student once and only once at each academic unit, academic organization and university that they enrolled at. Summing headcount over academic unit, academic organization and university will double count students and add up to more than the unduplicated system total, due to students utilizing courses from more than one location. Data is provided by UAA, UAF and UAS, extracted at 5pm on the report date from UA information systems.

UAA Application Funnel

Note: In April 2026, UAA implemented a fraud-prevention software platform to identify potentially bogus applications from entering our data systems. This creates a difference in application numbers between Fall 2025 and Fall 2026. For Fall 2025, this software was not in use and there were bogus applications in the count. As those do not appear for Fall 2026, it creates a misleading impression of a gap between the years that is not as large as portrayed in this count. Information is preliminary. All applications recorded by each university are considered; some students apply to multiple programs/courses and sometimes to multiple UA universities. The number of started applications counts both complete and incomplete applications. Accepted application counts and registered for course(s) counts are unduplicated at the reporting level; summing over distinct university level counts would add to more than the unduplicated system total because of double counting. To be counted as an accepted student who registered for course(s), an individual must have enrolled at the university delivering the program/course they were accepted to. Data is provided by UAA, UAF and UAS, extracted on the report date from UA information systems.

UAS Application Funnel

Note: Information is preliminary. All applications recorded by each university are considered; some students apply to multiple programs/courses and sometimes to multiple UA universities. The number of started applications counts both complete and incomplete applications. Accepted application counts and registered for course(s) counts are unduplicated at the reporting level; summing over distinct university level counts would add to more than the unduplicated system total because of double counting. To be counted as an accepted student who registered for course(s), an individual must have enrolled at the university delivering the program/course they were accepted to. Data is provided by UAA, UAF and UAS, extracted on the report date from UA information systems.

Applications, Admissions and Enrollment by Academic Unit

Week 5 of Instruction

Fall 2025 and Fall 2026 (September 22, 2025 and September 21, 2026)

Note: Information is preliminary. All applications recorded by university are considered; some students apply to multiple programs/courses and sometimes to multiple UA universities. Headcount is unduplicated at the reporting level, counting each student once and only once at each academic unit, academic organization and university. The number of started applications counts both complete and incomplete applications. Accepted application counts and registered for course(s) counts are unduplicated at the reporting level; summing over distinct university level counts would add to more than the unduplicated system total because of double counting. To be counted as an accepted student who registered for course(s), an individual must have enrolled at the university delivering the program/course they were accepted to, they may not be registered at the unit they applied and were accepted into. Data is provided by UAA, UAF and UAS, extracted on the report date from UA information systems.
